DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 44-68 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 57-68 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

No structure has been recited within the claim language for the distributed feedback element to generate a first laser output.

The use of "arranged" with reference to the recited limitation "an optical feedback element" does not describe structural connection, implies a function of the element not a structural description.

Claim 57 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: there is no structural relationship between a saturable absorption element, a distributed feedback element, a signal amplification element and an optical feedback element.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 44-68 are rejected under 35 U.S.C. 102(b) as being anticipated by Fischer et al (PN 5,646,951).

Column 2 lines 5-45 discloses providing a distributed saturable absorber to a laser cavity for wave-mixing, which will provide positive feedback from the in-phase reflections induced by the saturable absorbing grating. In column 6 lines 13-20 discloses the induced grating enhances the coherence of the beam, which is interpreted as providing reduce fluctuations.

Figure 1 illustrates the laser system having a saturable absorber (14), a saturable amplifier (16) and mirrors (12, 13), as described in column 3 the saturable absorber used in a demonstration was an erbium doped fiber.
